

25352A

Amendments to the Claims

1. (Currently Amended) A compressible, flexible, polymer fiber blanket comprising a plurality of polymeric fibrous pieces bonded together, wherein said plurality of polymeric fibrous pieces are produced from a thermally bonded, uniform layer of flexible, polymeric fibrous material.

2. (Currently Amended) The compressible, flexible, polymer fiber blanket of claim 1, wherein said ~~compressible, flexible, polymer fiber blanket thermally bonded polymer blanket product~~ comprises staple fibers and bicomponent fibers.

3. (Original) The compressible, flexible, polymer fiber blanket of claim 2, staple fibers comprise glass fibers and said and bicomponent fibers comprise thermoplastic fibers.

4. (Previously Presented) The compressible, flexible, polymer fiber blanket of claim 1, wherein said polymeric fibrous pieces are made of scrap material.

5. (Previously Presented) The compressible, flexible, polymer fiber blanket of claim 1, wherein said polymeric fibrous pieces are randomly oriented.

6. (Previously Presented) The compressible, flexible polymer fiber blanket of claim 1, wherein said polymeric fibrous pieces are arranged in a controlled pattern.

7. (Previously Presented) The compressible, flexible polymer fiber blanket of claim 1, wherein said polymeric fibrous pieces are geometric in shape.

8. (Previously Presented) The compressible, flexible polymer fiber blanket of claim 1, wherein said polymeric fibrous pieces comprise a lofty, acoustically insulating

25352A

portion having a density of between substantially $8.0 - 80.0 \text{ kg/m}^3$ and a relatively higher density skin along at least one face thereof, said skin having a thickness of between substantially $0.25 - 10.0 \text{ mm}$ and a density of between substantially $32.0 - 80.0 \text{ kg/m}^3$.

9. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said blanket is an automotive undercarpet.

10. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said blanket is a nonlaminated.

11. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said polymer fiber blanket has a percent wet compression of between about 15 to about 18 percent.

12. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said polymer fiber blanket has a percent dry compression of between about 16 to about 21 percent.

13. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said polymer fiber blanket has a percent dry wet recovery of between about 85 to about 87.5 percent.

14. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said polymer blanket is thermally bonded to at least one uniform layer of flexible, polymeric fibrous material.

15. (Previously Presented) The compressible, flexible polymer fiber blanket of claim 13 further comprising a secondary layer comprising a plurality of polymeric fibrous

25352A

pieces bonded together in a pattern, wherein said secondary layer of polymeric fibrous pieces is produced from a thermally bonded polymer blanket product.

16. (Original) The compressible, flexible polymer fiber blanket of claim 13, wherein said polymeric fibrous material has a lofty, acoustically insulating portion having a density of between substantially $8.0 - 80.0 \text{ kg/m}^3$ and a relatively higher density skin along a first face thereof, said skin having a thickness of between substantially $0.25 - 10.0 \text{ mm}$ and a density of between substantially $32.0 - 800.0 \text{ kg/m}^3$, said fibrous material being selected from a group consisting of (a) thermoplastic polymer staple fibers and thermoplastic bicomponent fibers, (b) glass staple fibers and thermoplastic bicomponent fibers and (c) a combination of (a) and (b).

17. (Original) The compressible, flexible polymer fiber blanket of claim 14, wherein said fibrous material is selected from a group of materials consisting of polyester, polyethylene, polypropylene, nylon, glass fibers, natural fibers and any mixtures thereof.

18. (Original) The compressible, flexible polymer fiber blanket of claim 14, wherein said polymeric fibrous material includes said relatively higher density skin along a second face thereof.

19. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said blanket further comprises at least one facing layer.

20. (Original) The compressible, flexible polymer fiber blanket of claim 17, wherein said facing layer comprises metallic foil, glass mats, polymer mats and blends thereof.

25352A

21. (Original) The compressible, flexible polymer fiber blanket of claim 1, wherein said blanket further comprises at least one water barrier layer.

22. (Withdrawn) A method of producing a compressible, flexible polymer fiber blanket comprising the steps of:

- a) providing a plurality of individual pieces of polymer fiber blanket;
- b) laying said plurality of pieces of polymer fiber blanket in a randomly oriented pattern;
- c) applying sufficient heat and pressure to said plurality of individual pieces of polymer fiber blanket to form said compressible, flexible polymer fiber blanket.

23. (Withdrawn) The method of claim 20, wherein said wherein said individual pieces of polymer fiber blanket are made of scrap polymer fiber blanket.

24. (Withdrawn) The method of claim 20, wherein said individual pieces of polymer fiber blanket are geometric in shape.

25. (Withdrawn) The method of claim 20, wherein said individual pieces of polymer fiber blanket comprise a lofty, acoustically insulating portion having a density of between substantially $8.0 - 80.0 \text{ kg/m}^3$ and a relatively higher density skin along at least one face thereof, said skin having a thickness of between substantially $0.25 - 10.0 \text{ mm}$ and a density of between substantially $32.0 - 800.0 \text{ kg/m}^3$.

26. (Withdrawn) The method of claim 20, wherein said blanket is an automotive undercarpet.

27. (Withdrawn) The method of claim 20, wherein said pad is a nonlaminated.

25352A

28. (Withdrawn) The method of claim 20, wherein said polymer fiber blanket has a percent wet compression of between about 15 to about 18 percent.

29. (Withdrawn) The method of claim 20, wherein said polymer fiber blanket has a percent dry compression of between about 16 to about 21 percent.

30. (Withdrawn) The method of claim 20, wherein said polymer fiber blanket has a percent dry wet recovery of between about 85 to about 87.5 percent.

31. (Withdrawn) The method of claim 20, wherein said polymer fiber blanket has a compressive strength value of

32. (Withdrawn) The method of claim 20, wherein said polymer blanket is thermally bonded to at least one layer of flexible, polymeric fibrous material.

33. (Withdrawn) The method of claim 26, wherein said polymeric fibrous material has a lofty, acoustically insulating portion having a density of between substantially $8.0 - 80.0 \text{ kg/m}^3$ and a relatively higher density skin along a first face thereof, said skin having a thickness of between substantially $0.25 - 10.0 \text{ mm}$ and a density of between substantially $32.0 - 800.0 \text{ kg/m}^3$, said fibrous material being selected from a group consisting of (a) thermoplastic polymer staple fibers and thermoplastic bicomponent fibers, (b) glass staple fibers and thermoplastic bicomponent fibers and (c) a combination of (a) and (b).

34. (Withdrawn) The method of claim 31, wherein said fibrous material is selected from a group of materials consisting of polyester, polyethylene, polypropylene, nylon, glass fibers, natural fibers and any mixtures thereof.

25352A

35. (Withdrawn) The method of claim 31, wherein said polymeric fibrous material includes said relatively higher density skin along a second face thereof.

36. (Withdrawn) The method of claim 20, wherein said blanket further comprises at least one water barrier layer.

37. (Previously Presented) A compressible, flexible, polymer fiber blanket comprising a plurality of polymeric fibrous pieces thermally bonded together wherein said polymeric fibrous pieces comprise fibrous material having a lofty, acoustically insulating portion having a density of between substantially $8.0 - 80.0 \text{ kg/m}^3$ and a relatively higher density skin along a first face thereof, said skin having a thickness of between substantially $0.25 - 10.0 \text{ mm}$ and a density of between substantially $32.0 - 800.0 \text{ kg/m}^3$, said fibrous material being selected from a group consisting of (a) thermoplastic polymer staple fibers and thermoplastic bicomponent fibers, (b) glass staple fibers and thermoplastic bicomponent fibers and (c) a combination of (a) and (b).
